

CLASSIC DESCENDER

Ref: 650F

Aluminum Assurer / Descender, Hot Forged

This aluminum assurer/descender, hot forged, features a classic and versatile design that makes it a reliable and versatile tool for vertical activities. With this device, you'll be able to descend safely and with control, whether using one or two ropes, and depending on their diameter, you can also use it in a reversible manner.

One of the standout features of this product is its small 35 mm hole, which allows you to quickly and easily attach a carabiner. This facilitates the belaying process and provides you with additional options for different setups and needs in your activity.

In addition to its versatile functionality, this assurer/descender retains the classic functions that have always been appreciated by users. You'll be able to perform fast descents, use the Italian hitching system, securely lock the rope, and rely on a fail-safe system that prevents accidental loss of the device during use.

As for its dimensions, this assurer/descender has a large 52 mm hole, providing compatibility with a wide range of ropes of different diameters. This allows you to use thicker ropes for greater control or thinner ropes when lightweight performance is required.

Finally, in terms of portability, this device stands out for its lightweight construction, weighing just 145 g. This makes it an ideal choice for those seeking a compact and easy-to-carry piece of equipment without compromising on safety or quality.

Información técnica:

Brand:	Fixe
Country of origin:	Spain/Italy
Material:	Aluminium
Breaking Strength:	40kN
Configurator:	No
Size long:	76x157mm
