The Vignemale

The double standardisation of the Vignemale, double and twin, make it a light rope for all kinds of ascents and climbs. Its light weight at just 41gr/m allows climbers to move without hardly noticing any weight or friction. It is recommended for ice climbing, mountaineering, mountain ascents and mixed climbing (rock and ice) and wall climbing. This light, all-terrain rope is very versatile, both for winter and summer activities.

Vignemale is one of the great icons of the Pyrenees. Standing at 3,299 metres, it is the highest peak in the axial chain of the Pyrenees. The surrounding environment is quintessentially alpine and its 800-metre north face poses great challenges to lovers of ice and wall climbing.

Technology

- Diameter: 8 mm
- Standardisation: double and twin
- Full Dry treatment: Water-repellent treatment on the sheath and core. Totally waterproofs the rope. Provides resistance to oil, grease and water. Extends the rope's lifespan. UIAA water repellent standard.
- Endurance construction: It favours sliding and extends the rope's lifespan. Braided with 36 threads.

Finishes:

- Middle Mark: indicates the halfway point on the rope with a black mark.
- 8 Mark: marking system that uses a red mark to indicate that there are 8 meters left to reach the end of the rope.
- Reflector: reflective indicator at both ends of the rope.
- Ultrasonic cut: stiffens the rope ends and protects them from wear.
