

PUPUT QUICKDRAW

Ref: Q30900

Puput Quickdraw

THE FIRST OF A NEW GENERATION

The Puput quickdraw is ideal for wall climbing, designed to comfortably carabiner the plate thanks to its characteristic nose. Its large size offers very comfortable manoeuvrability. With a large friction zone, it extends the life of the rope and carabiner.

Its robust polyamide quickdraw remains firm on the wall, without twisting, this way the carabiner will always face in the desired direction. The lower carabiner remains fixed thanks to the oblique seam that follows its shape. In the central part, its genuine safety seam makes it unmistakable.

The quickdraw is available in 4 lengths: 12 cm, 18 cm, 24 cm and 35 cm.

AN ESSENTIAL

The Puput is designed for intensive use in all types of wall activities.

The name Puput refers to the Upupa epops bird, which also has a characteristic nose that inspired our carabiner.

CARABINERING IS MORE THAN EVER

We tell you the 4 keys

Snagfree

The lower part of the nose is softened to facilitate the manoeuvre of unsnagging the plate and the rope.

CONICAL NOSE

Its pointed conical nose makes it easy to insert the carabiner into plates, pins or other connecting elements precisely and fluidly without snagging on any curve of the carabiner. At the same time, this geometry allows for the track to be dismantled with great ease.

Keylock

Its Keylock closure prevents possible snagging of the carabiner on the rope or plate.

VERSATILE SIZE

Its proportions offer great manoeuvrability for all types of situations on the wall. With 100 mm high, 64 mm wide, 24 mm and 26 mm opening range in its straight and curved versions respectively. Made of 7075 aluminium.

ITS WALL WORK EXTENDS THE LIFE OF YOUR ROPE

LARGE CONTACT AREA

Its 10,5 mm width allows the rope to be worked over a larger radius. This extends the useful life of both elements, rope and carabiner.

RIGIDITY

The triple-layer structure of the quickdraw gives it extra rigidity, preventing its twisting. The carabiners are always oriented in their initial position.

POLYAMIDE QUICKDRAW

Made with Polyamide, the same material as dynamic climbing ropes. A very resistant material to extend the useful life of the set.

OBLIQUE SEAM

The lower carabiner is fixed by an oblique seam that adapts to its shape and always keeps it fixed.

GENUINE

The central security seam has a genuine shape that makes it unmistakable.

RESISTANCE

Complying with the EN 12275 standard, its resistances are 22 kN vertically, 8 kN horizontally and 8 kN vertically with the gate open.

Packaging info

Vegetal Base INK 100% Recyclable Material 0% Plastic
