

# PUPUT MIX QUICKDRAW

Ref: Q35300

## PUPUTMIXA PERFECT BALANCE

The Puput Mix quickdraw combines two carabiners from the Puput family to offer a perfect balance between stability, comfort and lightness. The upper Puput classic carabiner (grey) provides control, ergonomics and intuitive clipping, while the lower Puput Wire carabiner (green) delivers a lighter, more dynamic and fluid handling.

This hybrid configuration provides excellent stability at the anchor point while achieving a key weight reduction in the rope-end carabiner. Its robust polyamide sling stays firm on the wall, preventing twisting and ensuring each carabiner maintains the correct orientation. The sling is available in 12, 18, 24 and 35 cm.

## AN ESSENTIAL

The Puput Mix is designed for sport climbing and multi-pitch routes, where the combination of comfort and fluid handling makes the difference.

The name Puput refers in Catalan to the bird “Upupa epops”, whose distinctive beak inspired the design of the carabiner.

## CLIPPING IS MORE THAN EVER

Here are the 4 key features

### Snagfree

The lower part of the nose is smoothed to make unclipping from the bolt hanger and the rope easier and more fluid.

### Conical nose

Its pointed conical nose makes it easier to insert the carabiner into bolt hangers, pitons or other connection points with precise and smooth handling, without catching on any part of the carabiner.

### Keylock

Its Keylock gate prevents the carabiner from snagging on the rope or the bolt hanger.

### Versatile size

Its proportions offer excellent manoeuvrability in all types of situations on the wall. With 100 mm height, 64 mm width, and a gate opening of 24 mm and 29 mm in the straight and wire versions respectively. Made from 7075 aluminium.

Its work on the wall extends the life of your rope

## RIGIDITY

The triple-layer structure of the sling provides extra rigidity, preventing any twisting. The carabiners always remain correctly oriented in their original position.

### Polyamide sling

Made from the same material used in dynamic climbing ropes: polyamide. A highly resistant material designed to extend the lifespan of the whole system.

## ANGLED STITCHING

The lower carabiner is secured with an angled stitch that adapts to its shape and keeps it firmly in place.

## DISTINCTIVE

The central safety stitch has a distinctive shape that makes it instantly recognisable.

## Strength

Compliant with EN 12275, its strength ratings are 22 kN on the major axis, 8 kN on the minor axis, and 8 kN with the gate open.

## Packaging info

Vegetal Base INK 100% Recyclable Material 0% Plastic
