

## 10,5 HANDY SEWN EYE

Ref: C601050020T

10.5HANDY SEWN EYE

HANDY 10,5 MM SEWN EYE

The Handy 10.5 mm Sewn Eye is a compact semi-static rope with a sewn termination, designed for setting up fast and consistent anchor points in rope access operations. It maintains the characteristic handling of the Handy 10.5 mm and incorporates the Sewn Eye termination together with the Classic+ construction featuring a 48-strand sheath.

### TECHNOLOGY

Anterior Siguiente

SEWN EYE

The Sewn Eye technology provides a sewn termination designed to be clipped with a carabiner, resistant (21.2 kN), which eliminates the need for knots, reduces bulk at the anchor point and maintains consistent geometry at the connection.

48 THREADS

The 48-strand sheath with compact 2x2 braid enhances structural stability and distributes wear more evenly. It reduces internal friction between strands, minimizes the risk of glazing and maintains a uniform feel with improved control in devices. Its structure supports stable handling even after repeated use.

CLASSIC +

The Classic + sheath construction facilitates the use of belay devices due to the friction generated between the rope and the device. The strands cross in pairs to form the rope sheath. The surface texture of these ropes creates friction with belay devices, allowing for slower and more controlled handling.

NATURE

Nature ropes do not incorporate a water-repellent treatment. They are not designed to resist water absorption, therefore their use is recommended in dry environments. They stand out for their flexibility and ease of handling, offering smooth performance both when tying knots and during belay operations.

10.5 MM DIAMETER

Diameter designed for agile handling and comfortable use in repetitive manoeuvres. It provides good device compatibility and smooth control during ascents and descents, maintaining a stable balance between control and handling in rope access work.

### RECOMMENDED USES

Rope access – dry conditions Excellent Rope access – wet conditions Good Wind farms Excellent Arboriculture Adequate Intervention and rescue Good

Indicative rating based on performance and compatibility in each application.

## COLORS AND LENGTHS

Available lengths 10 m 20 m 30 m 50 m Color available in all lengths White Choose the right rope for each activity The entire range, in detail

## TECHNICAL INFORMATION

- Number of falls: 18
- Weight: 70.5 g/m
- Impact force: 4.8 kN
- Sheath slippage: 0.0 %
- Static elongation: 4.0 %
- Static strength: 30.8 kN
- Sheath proportion: 37.6 %
- Flexibility (knotability): 0.9
- Knot strength: 20 kN
- Shrinkage in water: 3.0 %
- Terminal strength (Sewn Eye): 21.2 kN
- Material: Polyamide
